

PACKAGING INFORMATION

DRYline commercial-grade building wraps are wound on the smallest cores in the industry, creating compact, easy to handle rolls which take up less space in inventory and in transit. National Shelter Products palletizes all shipments of DRYline and stacks the rolls on the pallet in rows six high. Each row is banded and secured to the pallet so that it remains secure in transit and is easy to remove when in storage. BROADCAST™ custom-printed advertising is offered by individual rows of DRYline wrap so that the material is easy to identify and separate in inventory.

- Smallest core in the industry takes up less overall space for greater efficiency in shipping, conserving energy and helping the environment. DRYline offers more rolls in less space than other wraps!
- Banded rows for greater protection during shipment, preventing potentially wasteful damage to the product.
- Stretch-wrapped pallets protect the wrap during transit and storage.
- BROADCAST custom-printed advertising available by individual row; smallest custom-print minimum on the market for improved inventory management!

All pallets are stacked six rows high. Each row is banded to secure the rolls to the pallet to prevent shifting and to allow for removal of individual rows. Additional bands stabilize the stacked rows. The entire pallet is then stretch-wrapped to protect the rolls during shipping and storage.

The number of BROADCAST custom-printed rolls per pallet depends upon the length of the roll and the wrap material. We offer the industry's lowest minimum for printed building wrap.

GET STARTED CUSTOM PRINTING WITH WRAPLAB™

WrapLab is a tool for creating custom designs that can be printed on your building products. Choose from a gallery of professionally designed logo and messaging templates, or upload your own custom, full-color messages. With WrapLab, you can design and include up to six unique, alternating messages on a single roll.
